

## DAG: Data Adaptive Ghostbuster

To pay for a new broadband acquisition or to process the data clever?

The PSS-GEO broadband processing includes DAG algorithm: PSS-GEO exclusive proprietary technology designed to deghost marine towed streamer data.

- It is capable to extend the Bandwidth of vintage, standard and unconventional (deep/slant streamer) data.
- The approach is based on parameterized optimal adaptive extractive deghosting.

DAG has been successfully used for the last half year for client's needs. For more information email us [rune@pss-geo.com](mailto:rune@pss-geo.com)
